

DESCRIPTION

QiCYCLE's C2 electric-assist bicycle is here to turn the city upside down. Its pedal assistance and its 8-speed transmission are just perfect to get everywhere in the city. Also, for a limited amount of time, it includes a basket especially designed for the bike model.

The boost you need the most

The QiCYCLE C2's torque sensor analyzes your pedaling and automatically adjusts to give you the assistance you need. It has three assistance modes and a non-assistance mode so you can go from gentle rides to hard climbs and sprints.

Up to 65km per charge

Thanks to its 36V 7.5Ah lithium battery, its torque sensor and its high-speed motor, the QiCYCLE C2 has a range of 45-65km per charge - don't let the action catch you out of the loop!

8-speed transmission

The shifter allows for easy and fast gear shifting. Shifting gears has never been smoother or more precise.

The only display you should look at

The QiCYCLE C2 urban bike has a large LED display that adjusts to ambient light automatically. It displays values such as speed, battery status, ride information, charging lights or Bluetooth.

An app that goes smoothly

Use the QiCYCLE app to record information about your rides and workouts - everything you need, right at your fingertips!
